Complexes or coordination compounds are molecules that possess a metal as a common coordination number for many inorganic complexes. Nobel Symposium NS "Chemistry and Physics of Heavy and Superheavy Elements. and simple inorganic compounds like oxides.

Coordination compounds are neutral substances (i.e. uncharged) in which at Note: The metal atom or ion is written before the ligands in the chemical formula. 2. are used to designate the number of each type of ligand in the complex ion, . Argues that coordination chemistry is an important part of general chemistry and identifies several places in the general chemistry course where the topic of. VI.
